

Questions

For the tests with images for the 5th year students, discipline Medical Imaging

- Which of the listed anatomical structures that refer to the ENT organs are visible in the image:
- Tomography reveals:
- Which of the following are indications for performing the imaging investigation:
- Which of the following statements referring to the image are correct:
- The computed tomography reveals:
- The radiography reveals:
- Radiography represents:
- The pathological sign, shown in the picture:
- Radiography most likely reveals:
- The patient is positioned to perform:
- The radiological sign shown on the image:
- Which of the following statements about the image shown are correct:
- Appreciate the degree of hypertrophy of adenoid vegetations in the patient in the presented image:
- Which of the following statements about the presented image are correct:
- The indication for performing the presented radiography, most likely, was:
- Computed tomography most likely reveals:
- Computed tomography reveals:
- Which of the following pathological signs are present on radiography:
- The radiological picture is relevant for:
- Which of the following pathological signs are present on the radiography:
- Among which pathologies will be made the differential diagnosis in case of pathological changes present on radiography:
- Which of the CT signs characteristic for pulmonary artery thromboembolism are present in the CT scan:

- Black arrows indicate:
- White arrows indicate:
- Pathological changes, present on the tomographic image, are relevant for:
- Which of the listed pathological signs are present on the tomographic image:
- Pathological signs on radiography:
- The image represents:
- Pulmonary angiography reveals:
- Suspicion of which of the pathologies listed are indications to perform the investigation in the image:
- Which of the following statements about the presented image are correct:
- Radiographic image shows:
- Which radiological criteria need to be assessed in this case:
- Which of the following statements about the presented image are true:
- Indicate the pathologies between which is necessary to make the differential diagnosis in the case of the computed tomography results, presented in the image:
- What radiological criteria should be assessed in this case:
- Indicate the name of the investigation:
- Most likely, the image shows:
- Magnetic resonance imaging most likely reveals:
- The arrows indicate:
- The black arrow most likely indicates:
- Tomography most likely reveals:
- Ultrasonography reveals:
- Which of the following is determined by the image:
- Which of the listed pathological changes of the spine are present in the image:
- Which radiological criteria are evaluated in the case of the radiological investigation in the image:

- Instructions for performing the investigation, shown in the image, include:
- Which of the following statements about the line, indicated by arrows, are correct:
- Which of the following are contraindications to conducting the investigation shown in the picture:
- Which of the following are possible complications of the investigation, shown in the picture:
- What will be the most probable diagnostic conclusions based on the presented images:
- The imaging changes on the presented images allow us to suspect:
- Which of the indicated pathologies could be the cause of the pathological changes in the radiograph:
- The most probable diagnostic conclusions in the case of the pathological changes presented are:
