

Exam questions - 2019-2020 (Images)

1. What does the symbol in the image mean?
2. The figure most likely shows a schematic representation of image acquisition in:
3. The figure displays:
4. The pathological findings displayed on the radiographic image include:
5. The pathological findings displayed on the radiographic image are usually encountered in:
6. The figure displays:
7. The arrow on the displayed image is most likely pointing towards:
8. The pathological findings displayed on the image are most likely related to:
9. The pathological findings displayed on the image include:
10. The most likely diagnosis related to the pathological findings displayed on the image is:
11. The equipment displayed in the figure is most likely used for:
12. The figure most likely displays a schematic representation of:
13. The figure most likely displays:
14. The image displayed in the figure most likely represents:
15. The error made during obtaining the displayed orthopantomography image was most likely related to:
16. The error made during obtaining the displayed orthopantomography image was most likely related to:
17. The error made during obtaining the displayed orthopantomography image was most likely related to:
18. Based on its radiographic characteristics, the displayed bone fracture is likely to be:
19. The displayed image was most likely obtained using:
20. The displayed image includes:
21. During the acquisition of the displayed images, the patient was likely exposed to:
22. Which imaging modalities were used for obtaining the displayed images?
23. The error made during obtaining the displayed orthopantomography image was most likely related to:
24. The error made during obtaining the displayed orthopantomography image was most likely related to:
25. The figure most likely displays a schematic representation of:
26. The error made during obtaining the displayed orthopantomography image was most likely related to:
27. The figure most likely displays a schematic representation of:
28. The pathological findings displayed in the figure are rather suggestive of:
29. The pathological findings displayed on the radiographic image are rather suggestive of:
30. The pathological findings displayed on the radiographic image are rather suggestive of:
31. The pathological findings displayed on the radiographic image are rather suggestive of:
32. The pathological findings pointed by the arrow are more likely to be encountered in:
33. The radiological findings are rather suggestive of:

34. The radiographic findings are most likely to represent:
35. The radiographic findings are most likely to represent:
36. The radiological findings are most likely to represent:
37. The arrows are pointing towards the:
38. The arrows are pointing towards:
39. The radiographic image most likely reveals:
40. The radiographic image most likely reveals:
41. The radiographic image most likely reveals:
42. The displayed image and image projection can be best described as:
43. Which anatomical structures are visualized on the displayed radiographic image?
44. The radiographic image most likely reveals:
45. The abnormal findings displayed on the radiographic image include:
46. The abnormal findings displayed on the radiographic image are most likely to be encountered in:
47. The patient whose orthopantomography image is displayed is likely to be:
48. The patient whose orthopantomography image is displayed is most likely to be:
49. The displayed orthopantomography was likely obtained in a patient between the age of:
50. The displayed orthopantomography was likely obtained in a patient between the age of:
51. The arrows are most likely pointing towards:
52. The abnormal findings displayed on the radiographic image are most consistent with:
53. What abnormal findings can be detected on the displayed radiographic image?
54. The pathological findings pointed by the arrow can be best described as:
55. The displayed radiographic image reveals:
56. The arrow on the displayed radiographic image is likely pointing towards:
57. The displayed radiographic image reveals:
58. The displayed radiographic image reveals:
59. The displayed image can be best described as:
60. The arrow on the displayed radiographic image is likely pointing towards:
61. The bone fracture on the displayed image can be best described as:
62. The abnormal findings on the displayed image include:
63. The image is likely displaying a schematic representation of:
64. The image is likely displaying a schematic representation of:
65. The image is likely displaying a schematic representation of:
66. The displayed image represents:
67. The abnormal findings on the displayed image include:
68. The abnormal findings on the displayed orthopantomography image include:
69. The bone fracture(s) on the displayed image can be best described as:
70. The abnormal findings on the displayed orthopantomography image include:
71. The bone fracture(s) on the displayed image can be described as:
72. The abnormal findings on the presented image include:
73. The radiographic image likely reveals:
74. Which statements related to the presented radiographic image are correct?
75. The arrows on the displayed image are likely pointing towards:

76. The radiographic image most likely reveals:
77. The radiographic image most likely reveals:
78. Which statements related to the presented radiographic findings are correct?
79. The image is likely displaying a schematic representation of:
80. The arrow on the displayed image is most likely pointing towards:
81. The radiographic findings on the displayed image include:
82. The abnormal findings pointed by arrow on the displayed image likely represent:
83. The radiographic image most likely reveals:
84. Radiographic changes are suggestive of:
85. The radiographic image most likely reveals:
86. The image was most likely obtained in a patient who underwent:
87. Select the correct answers related to the displayed image:
88. Which structure is most likely indicated by the arrows?
89. The radiographic image most likely reveals:
90. The black arrows are most likely indicating:
91. Pathological findings indicated by arrows most likely represent:
92. The radiographic image most likely reveals:
93. The radiographic image most likely reveals:
94. The arrows on the displayed image are likely pointing towards:
95. The radiological findings pointed by arrow include:
96. The arrow on the displayed image is likely pointing towards:
97. The radiological findings pointed by the arrow include:
98. The radiological findings pointed by the arrow include:
99. The image most likely reveals:
100. The radiological findings on the displayed image include:
101. The radiological findings on the displayed image include:
102. The image most likely reveals:
103. The radiological findings on the displayed image include:
104. The radiological findings on the displayed image include:
105. The image most likely reveals:
106. The radiological findings on the displayed image include:
107. The imaging findings include:
108. The displayed orthopantomography was likely obtained in a patient between the age of:
109. The imaging findings include:
110. The patient whose orthopantomography image is displayed is most likely to be:
111. The displayed orthopantomography was likely obtained in a patient between the age of:
112. The patient whose orthopantomography image is displayed is most likely to be:
113. The displayed orthopantomography was likely obtained in a patient between the age of:
114. The displayed orthopantomography was likely obtained in a patient between the age of:
115. The displayed orthopantomography was likely obtained in a patient between the age of:
116. The patient whose orthopantomography image is displayed is most likely to be:
117. The patient whose orthopantomography image is displayed is most likely to be:

118. The displayed orthopantomography was likely obtained in a patient between the age of:
119. The displayed orthopantomography was likely obtained in a patient between the age of:
120. The displayed orthopantomography was likely obtained in a patient between the age of:
121. The displayed orthopantomography was likely obtained in a patient between the age of:
122. The displayed orthopantomography was likely obtained in a patient between the age of:
123. The displayed orthopantomography was likely obtained in a patient between the age of:
124. The displayed orthopantomography was likely obtained in a patient between the age of:
125. The condition pointed by the arrow on the displayed image can be best described as:
126. The condition pointed by the arrow on the displayed image most likely represents:
127. The pathology pointed by the arrow on the displayed image most likely represents:
128. The pathology pointed by the arrow on the displayed image most likely represents:
129. The structures pointed by arrows on the displayed image most likely represent:
130. The structure pointed by arrow on the displayed image most likely represents:
131. The imaging findings pointed by the arrow are favoring the diagnosis of:
132. The pathology pointed by the arrow on the displayed image most likely represents:
133. Differential diagnosis of the imaging findings pointed by the arrow is most likely to be required between:
 134. The pathology pointed by the arrow on the displayed image most likely represents:
 135. The pathology presented on the radiographic image most likely represents:
 136. The imaging findings pointed by the arrow are favoring the diagnosis of:
 137. The imaging findings pointed by the arrow are likely to represent:
 138. The radiographic image most likely reveals:
 139. The radiographic image most likely reveals:
 140. The imaging findings pointed by the arrow are likely to represent:
 141. The arrow on the displayed image is most likely pointing towards:
 142. The arrow on the displayed image is most likely pointing towards:
 143. The arrow on the displayed image is most likely showing:
 144. The imaging findings on the displayed orthopantomography include:
 145. The imaging findings on the displayed orthopantomography include:
 146. The imaging findings pointed by the arrow are most likely to represent:
 147. The findings on the displayed radiographic image are most likely to represent:
 148. The findings on the displayed radiographic image include:
 149. The imaging findings on the displayed orthopantomography include:
150. The patient whose orthopantomography image is displayed most likely underwent the following dental treatment:
 151. The imaging findings on the displayed orthopantomography include:
 152. The imaging findings on the displayed orthopantomography include:
 153. The imaging findings on the displayed orthopantomography include:
 154. The imaging findings on the displayed orthopantomography include:
 155. The imaging findings on the displayed orthopantomography include:
 156. The radiological findings on the displayed image include:
 157. The radiological findings most likely represent:

158. The radiological findings most likely represent:
159. The radiological findings on the displayed image include:
160. The radiological findings on the displayed image include:
161. The arrow on the displayed image is most likely pointing towards:
162. The radiological findings most likely represent:
163. The radiographic image is most likely revealing:
164. The imaging findings include:
165. The imaging findings most likely reveal:
166. The arrow on the displayed image is most likely pointing towards:
167. Which of the following statements related to the condition pointed by the arrow are correct?
168. The predominant type of periodontal affection on the displayed image can be best described as:
169. The periodontal abnormalities on the displayed orthopantomography include:
170. On the displayed orthopantomography, the periodontal abnormalities adjacent to the teeth 3.7 and 3.6 include:
 171. The radiological abnormalities on the displayed image include:
 172. The arrows on the displayed image are most likely pointing towards the:
 173. The arrows on the displayed image are most likely pointing towards the:
 174. The arrow on the displayed image is most likely pointing towards:
 175. The arrows on the displayed image are most likely pointing towards the:
 176. The arrows on the displayed image are most likely pointing towards the:
 177. The arrows on the displayed image are most likely pointing towards the:
 178. The arrows on the displayed image are most likely pointing towards the:
 179. The arrows on the displayed image are most likely pointing towards the:
 180. The arrows on the displayed image are most likely pointing towards:
 181. Select the figures that are correctly matching the corresponding anatomical structures:
 182. Select the figures that are correctly matching the corresponding anatomical structures:
 183. Select the figures that are correctly matching the corresponding anatomical structures:
 184. Select the figures that are correctly matching the corresponding anatomical structures:
 185. Select the figures that are correctly matching the corresponding anatomical structures:
 186. Select the figures that are correctly matching the corresponding anatomical structures:
 187. Select the figures that are correctly matching the corresponding anatomical structures:
 188. Select the figures that are correctly matching the corresponding anatomical structures:
 189. Which of the listed anatomical structures are visible on the displayed radiographic image?
 190. Which of the listed anatomical structures are visible on the displayed radiographic image?
 191. Select the figures that are correctly matching the corresponding anatomical structures:
 192. Select the figures that are correctly matching the corresponding anatomical structures:
 193. Select the figures that are correctly matching the corresponding anatomical structures and teeth components:
194. Select the figures that are correctly matching the corresponding anatomical structures and teeth components:
195. Select the figures that are correctly matching the corresponding anatomical structures and teeth components:

196. Select the figures that are correctly matching the corresponding anatomical structures and teeth components:
197. Select the figures that are correctly matching the corresponding anatomical structures and teeth components:
198. Select the figures that are correctly matching the corresponding anatomical structures and teeth components:
199. Select the figures that are correctly matching the corresponding anatomical structures and teeth components:
200. Select the figures that are correctly matching the corresponding anatomical structures and teeth components:
201. Select the figures that are correctly matching the corresponding anatomical structures:
202. Select the figures that are correctly matching the corresponding anatomical structures:
203. Select the figures that are correctly matching the corresponding anatomical structures:
204. Select the figures that are correctly matching the corresponding anatomical structures:
205. The patient whose image is displayed most likely underwent:
206. The patient whose image is displayed most likely underwent:
207. The patient whose image is displayed most likely underwent:
208. Imaging findings on the displayed picture include:
209. The imaging findings on the displayed picture are most likely to be encountered in:
210. The imaging abnormalities within the yellow circle are most likely to represent:
211. The imaging findings on the displayed picture include:
212. The imaging findings on the displayed picture include:
213. The radiological findings on the displayed image include:
214. The radiographic image reveals:
215. The radiographic image reveals:
216. The presented radiographic image allows the evaluation of:
217. The presented radiographic image allows the evaluation of:
218. The presented computed tomography image reveals:
219. The presented computed tomography image reveals:
220. The radiological findings on the displayed image include:
221. The radiological findings on the displayed image include:
222. The presented computed tomography image reveals:
223. Which of the listed statements related to the radiological findings on the presented image is most accurate?
224. On the displayed image, the arrow is most likely indicating:
225. The displayed set of images and shown measurements are most likely used for:
226. The main purpose of the obtained set of images and displayed measurements can be best described as:
227. The displayed set of images and shown measurements are most likely used for:
228. The imaging findings on the displayed orthopantomography include:
229. Which of the following statements related to the displayed orthopantomography are correct?
230. The imaging findings on the displayed orthopantomography include:

231. The imaging findings on the displayed picture include:
232. The radiological findings on the displayed image include:
233. The radiological findings on the displayed image include:
234. The radiological findings on the displayed image include:
235. The imaging findings on the displayed orthopantomography include:
236. The imaging findings on the displayed orthopantomography include:
237. The displayed measurements are most likely used for:
238. What aspects have most likely been analyzed on the presented tomographic image?
239. What aspects can be analyzed on the presented tomographic image?
240. The displayed measurements on the presented tomographic image are most likely used for:
241. The displayed measurements and tomographic image are most likely used for:
242. The displayed measurements and tomographic image are most likely used for:
243. What aspects have been analyzed on the presented tomographic image?
244. Which of the listed statements related to the presented imaging set are correct?
245. Which of the listed statements related to the presented imaging set are correct?
246. Which radiographic signs of dental implant failure can be determined on the presented image?
247. Which of the listed statements related to the presented imaging set are correct?
248. The abnormal findings on the presented image include:
249. The arrow on the displayed image is most likely showing:
250. The abnormal findings on the presented image include:
251. The arrow on the displayed image is most likely showing:
252. The abnormal findings on the presented image set include:
253. The abnormal findings on the presented images are rather suggestive of:
254. The presented images are most likely used for:
255. Which of the listed statements related to the presented images are correct?
256. Which of the listed statements related to the presented image are correct?
257. Which of the listed anatomical structures can be visualized on the presented image?
258. The radiological findings on the presented image are most likely to be encountered in:
259. The radiological sign seen on the displayed radiographic image is usually called:
260. Which of the listed statements related to the pathological changes pointed by arrows on the displayed image are correct?
261. The abnormalities pointed by arrows on the presented image are most likely to represent:
262. The radiological abnormalities on the displayed images are most likely to represent:
263. The radiological abnormalities on the displayed images are most likely to represent:
264. Which statements about the pathology shown on the displayed images are correct?
265. The imaging findings and anatomical structures that can be visualized on the presented radiography include:
266. The radiological findings on the presented image include:
267. The radiological findings on the presented image include:
